Fox Blocks Wall Lengths.pdf

ICF's work with a horizontal tolerance of $\pm 1/8$ " per 48", therefore, wall lengths may not always work to the ideal block dimensions. To bring accuracy into your job Fox Blocks recommends working with a common seam* at one location on each wall that requires a cut. Doing this will ensure you end with the wall measurement you have planned for.

The tables on the following pages will show you the ideal length of walls resulting in the least amount of waste. Fox Blocks still recommends working with common seams to ensure the most accurate project possible.

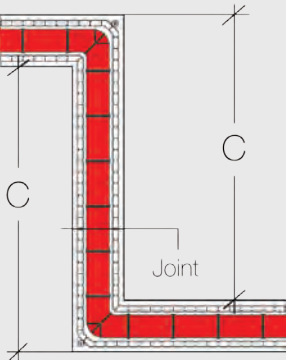

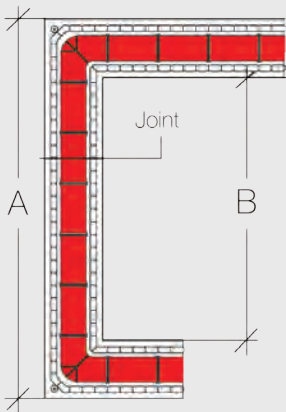

Common seam photo. Common seams will bring accuracy to your job as well as a reduced man hour rate.
